MAYUR P

Software Engineer | Backend & Product Engineering

mayurkarthick2006@gmail.com | github.com/0xMayurrr | mayurworks.vercel.app | linkedin.com/in/mayurp03 | Coimbatore, India

PROFESSIONAL SUMMARY

Software engineer who designs, builds, tests, deploys, and ships backend and product systems: REST/GraphQL APIs, third-party provider integrations, webhook-driven workflows, authentication, and multi-tenant data access. Completed a six-month software engineering internship and released software publicly on npm, Product Hunt, and Google Play. Web3/EVM engineering is an additional strength. Mentored 80+ students, 7+ hackathon wins/top positions.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Go, Java, Kotlin, SQL

Backend & APIs: Node.js, Express.js, REST, GraphQL, Webhooks, Event-Driven Processing, Authentication/Authorization, Multi-Tenancy, Provider Abstraction, Adapter Pattern, API Gateway, Caching, Rate Limiting, Failover

Data: PostgreSQL, Supabase (Row-Level Security), Firebase (Auth, Firestore), Redis

Testing, Deployment & Tools: API Testing (Postman), End-to-End Testing, Debugging, Docker, Vercel, Render, Expo/EAS, Git/GitHub, Pull Requests, Code Review, System Design

Frontend & Mobile: React, Next.js, React Native, Android (Kotlin/Java), Expo

Web3 (additional): Solidity, Hardhat, ethers.js, EVM, OpenZeppelin

AI: AI/LLM APIs, AI Agents, LangChain, AI-assisted development (Copilot, Claude)

EXPERIENCE

Software Engineer Intern | GetNow Solutions — *Mar 2026 – Aug 2026 | Remote*

Stack: *TypeScript, JavaScript, Solidity · Node.js, Express.js, GraphQL, Hardhat · PostgreSQL/Supabase*

- Built backend APIs and integration layers connecting external providers, account/wallet services, and backend systems, with authentication, data validation, and error handling across data pipelines.
- Developed webhook-driven workflows and owned development, integration, debugging, API testing, and deployment for my assigned work, alongside Web3 integrations.
- Contributed to integration design, architecture discussions, and engineering standards; submitted and reviewed pull requests in a Git/GitHub workflow.

Innovation Lead | Innovation & Incubation Cell (E-Cell), Rathinam Global University — *Dec 2024 – Feb 2026*

- Gave technical direction to student hackathon/product teams on stack selection and architecture, supported innovation programs and events

PRODUCTS & ENGINEERING PROJECTS

RPCForge — Open-Source Multi-Provider API Gateway (Solo) — *Node.js · TypeScript · REST · Docker · Vercel*

- Built a self-hostable API gateway routing requests across multiple upstream providers and chains (Ethereum, Polygon, BSC, Arbitrum) with caching, rate limiting, API-key access, and automatic failover.
- Designed the provider-abstraction and routing layer for fault tolerance and error handling, plus a real-time usage dashboard.
- Owned architecture, testing, Docker/Vercel deployment, npm CLI, and Product Hunt launch. GitHub | Live | npm | Product Hunt

GlobalPay Hub — Provider-Agnostic Financial API Platform (Team of 2) — *Node.js · Express.js · TypeScript · JavaScript · GraphQL · PostgreSQL · Supabase*

- Engineered an adapter-based, provider-agnostic backend unifying banking, FX, KYC, and digital-asset providers (Unit, Currencycloud, Tatum, Sumsub) behind a single REST/GraphQL API; personally implemented backend services and provider integrations.
- Built webhook-driven, event-based processing that syncs provider events into internal account and transaction records, with error handling for provider responses.
- Secured with hashed API-key authentication, RLS-based multi-tenant isolation, request logging, and sandbox/production environment separation.
- Verified endpoints, webhook flows, and provider integrations with Postman API tests and end-to-end testing across sandbox and production environments.

ShieldHire — Hiring & Verification Android App (Solo) — *Kotlin · Java · Android SDK · Firebase Firestore*

- Independently designed, built, and released a native Android app (UI, business logic, Firebase Auth/Firestore, debugging, testing, Play Store packaging); live on Google Play in about two weeks.

CryptoWallet — Mobile Wallet & Token Settlement Platform (Team of 2) — *React Native · Expo · TypeScript · JavaScript · Solidity · Hardhat · PostgreSQL*

- Built the React Native/Expo app and Supabase backend (PostgreSQL, auth, realtime, storage, RPCs) for a wallet and token settlement platform supporting 12 tokens across 3 networks (Sepolia, Polygon Amoy, TRON).
- Implemented Solidity token infrastructure with Hardhat: upgradeable contracts, token factory, multi-currency bridge, and reserve-based conversion.
- Integrated Alchemy, Etherscan, TronGrid, 0x, Uniswap V3, SunSwap V2, and WalletConnect/MetaMask with fallback and error handling; implemented transaction verification (nonce validation, replay protection) and secure keychain storage.
- End-to-end tested wallet and settlement flows; shipped Android builds via Expo/EAS (AAB) through Google Play Console.

OPEN SOURCE

- **OpenZeppelin Contracts Wizard:** authored PR #782 (contributor docs). **Scaffold-ETH 2:** authored PR #1243 (useScaffoldReadContract feature). **Panana Predictions:** opened PR #1 (Hugging Face FinBERT sentiment analysis). **OSCI** (India) contributor, 2025 and 2026.

ACHIEVEMENTS & LEADERSHIP

- **Mentored 80+ students** on technology selection, software development, architecture, hackathon builds, and career roadmaps (RGU E-Cell).
- **20+ hackathons, ideathons, buildathons, and summits; 7+ wins/top positions**, incl. Winner: Tech Masters ’26, RAC-A-THON; Runner-up: Google Developer Hackathon; also SingularityNET, Aptos.
- **Organized Hack Beyond The Limits**, a 24-hour national hackathon with 200+ participants, supporting technical coordination.

EDUCATION

B.Sc. Computer Technology (Blockchain & Distributed Computing) | Rathinam Global University — *2023 – 2026 | CGPA 8.3/10*
