MAYUR P

Software Engineer | Full-Stack & Backend | Systems Builder

mayurkarthick2006@gmail.com | github.com/0xMayurrr | mayurworks.vercel.app | Coimbatore, India

OBJECTIVE

Software engineering intern seeking to join Mindbun's engineering team — writing clean, maintainable code across web and backend systems, debugging and optimizing performance, and contributing through code review — with an eye toward the PPO track.

TECHNICAL SKILLS

- Languages: JavaScript, TypeScript, Java, Kotlin, Python, SQL (currently learning: Go)
- Backend & APIs: Node.js, Express.js, REST APIs, GraphQL, Webhooks, Authentication & Authorization, Provider Abstraction, Multi-Tenant Systems
- Frontend & Mobile: React, React Native, Next.js, Android (Kotlin/Java), Expo, HTML/CSS
- Databases & Infrastructure: PostgreSQL, Supabase, Firebase (Auth, Firestore), Row-Level Security, Git, Vercel
- Engineering Practice: System Design, Debugging & Performance Optimization, Code Review, Pull-Request Workflows, Release Pipelines, Manual QA & Postman-based Testing
- AI-Assisted Development: Copilot, Claude — used to accelerate development with manual review and validation

EXPERIENCE

Software Engineer Intern — GetNow Solutions *Mar 2026 – Aug 2026 | Remote*

- Built backend integration layers connecting external providers, wallet/account connectivity, and data pipelines to production services, engineering for data correctness and reliability across the full pipeline — end-to-end ownership from design through deployment.
- Debugged and refined provider-integration and error-handling patterns, contributing to architecture decisions and engineering standards for the backend and integration layers.
- Collaborated with the engineering team through the full code review cycle — submitting and reviewing pull requests and following code-quality standards, learning best practices from senior engineers.

Led Innovation — Innovation & Incubation Cell *Dec 2024 – Feb 2026 | Coimbatore*

- Led the entrepreneurship cell's technical/product-building programs, mentoring early-stage student teams on ideation, architecture, and go-to-market — a fast-paced environment requiring quick learning across diverse technical challenges.

SELECTED ENGINEERING PROJECTS

GlobalPay Hub — Financial Infrastructure Platform — *Node.js · TypeScript · Express.js · GraphQL · PostgreSQL · Supabase*

- Engineered a provider-agnostic backend unifying banking, FX, and KYC providers (Unit, Currencycloud, Tatum, Sumsub) behind a single REST/GraphQL API, following the full software development lifecycle from design through deployment.
- Built webhook-driven transaction processing syncing provider events into internal accounts and transaction records; debugged and validated every endpoint and webhook flow manually via Postman across sandbox and production.
- Secured the platform with hashed API-key authentication and RLS-based multi-tenant isolation — attention to detail on security and correctness under a provider-abstraction architecture.

RPCForge — Multi-Provider Gateway Service — *Node.js · TypeScript · REST APIs*

- Designed and independently shipped a backend gateway unifying access across multiple upstream RPC providers, architecting a failover routing layer to reduce single-provider downtime risk — then launched it publicly on Product Hunt.
- Owned performance and reliability end-to-end: rate management, error handling, and optimization across upstream providers.

ShieldHire — Hiring & Verification App — *Android · Kotlin/Java · Firebase (Auth, Firestore)*

- Designed, built, and independently shipped a native Android app end-to-end — UI, business logic, and release pipeline — from concept to a production Google Play listing in about two weeks.
- Owned the full release process solo: debugging, manual testing, and Play Store packaging, demonstrating comfort taking on diverse technical challenges without close supervision.

CryptoWallet — Transaction Infrastructure — *React Native · TypeScript · Supabase*

- Built transaction-verification logic (nonce validation, replay protection) and a provider-integration layer with fallback/error handling; secured the app with OS-level keychain storage and per-device salts.

OPEN SOURCE & COMMUNITY

- Merged contribution to OpenZeppelin (PR #782); OSS contributor on Scaffold-ETH 2; Hugging Face FinBERT feature contribution — comfortable working in and contributing to existing codebases with established conventions.

ACHIEVEMENTS

- Organized Hack Beyond The Limits, a 24-hour national hackathon with 200+ participants (logistics, judging, sponsorships); participated in 15+ hackathons with 7+ wins/top positions — strong problem-solving under time pressure.
- Submitted Credora, a credential platform, to the MeitY Blockchain India Challenge 2024.

EDUCATION

B.Sc. Computer Technology (Blockchain & Distributed Computing)

Rathinam College of Arts and Science, Coimbatore | 2023 – 2026 | CGPA: 8.3/10
